

## **Role: QA Engineer**

### **Job Description:**

We are looking for a **QA Automation Engineer** with 2+ years of experience to help build and maintain automated tests for web applications, APIs, and workflows. You will work closely with developers and QA leads to ensure product quality through automation and manual validation.

---

### **Key Responsibilities**

- Develop and maintain automated test scripts for **web applications** (React/Next.js) using tools like **Cypress** or **Playwright**.
  - Write and execute **API tests** for REST and GraphQL endpoints.
  - Validate **UI functionality, responsive design, and cross-browser compatibility**.
  - Collaborate with developers to understand requirements and ensure test coverage.
  - Perform **manual testing** for new features and critical workflows when needed.
  - Report and track defects, and verify fixes in subsequent releases.
  - Participate in **code reviews** for test scripts and maintain clean, reusable automation code.
  - Work with CI/CD pipelines to integrate automated tests into the build process.
  - Stay updated on QA best practices and automation trends.
- 

### **Must-Have Qualifications**

- **2+ years** of experience in QA automation or software testing.
  - Hands-on experience with **Cypress**, **Playwright**, or similar automation tools.
  - Basic understanding of **JavaScript/TypeScript** for writing test scripts.
  - Experience testing **REST APIs** (Postman, automated API tests).
  - Familiarity with **CI/CD tools** (GitHub Actions, Jenkins, or similar).
  - Strong attention to detail and problem-solving skills.
- 

### **Nice-to-Haves**

- Exposure to **GraphQL API testing**.
- Knowledge of **performance testing tools** (JMeter, k6).
- Experience with **video or media workflows** testing.

- Understanding of **Git** and version control.
